

Poornima

Software Engineer | Full Stack Developer (MERN)

poornima9437@gmail.com • +91-7986411504 • Lucknow, India
linkedin.com/in/poornimadeveloper • github.com/poornimaaaa

SUMMARY

Software Engineer specializing in React.js, Node.js, Express.js, and MongoDB. Built production-ready MERN applications featuring AI integration, RESTful APIs, JWT authentication, real-time communication, and cloud deployment. Seeking an entry-level Software Engineer or Full Stack Developer role.

EDUCATION

Bachelor of Technology in Computer Science and Engineering

2022 - 2026

Babu Banarasi Das University, Lucknow

July 2026 | CGPA: 7.21/10 | Relevant Coursework: OOP, DBMS, Operating Systems, Computer Networks

PROJECT EXPERIENCE

• PitchPerfect: AI Interview & Communication Practice Platform

May 2026 - Jul 2026

Tech Stack: React.js, Node.js, Express.js, MongoDB Atlas, Google Gemini API, JWT, Vercel, Render

GitHub | Live Demo

- Architected a full-stack AI interview practice platform, designing 8 RESTful API endpoints for authentication and pitch-session management with React.js, Node.js, Express.js, and MongoDB Atlas.
- Designed reusable prompt templates for 6 AI interview scenarios via Google Gemini (HR, Technical, Behavioral, Salary Negotiation, Business, Communication), reducing duplicate prompt logic.
- Secured 8 pitch-session API endpoints with JWT-based authentication and router-level middleware, keeping signup and login publicly accessible.
- Developed a configurable interview workflow supporting 6 interview parameters, enabling reusable AI-driven interview simulations across multiple job scenarios.
- Implemented structured AI evaluation producing JSON-based feedback across 5 scoring dimensions, with automatic validation and fallback handling for malformed AI responses.

• NextUp: Digital Queue Management System

Nov 2025 - Apr 2026

Tech Stack: React.js, Node.js, Express.js, MongoDB Atlas, Socket.io, Vercel, Render

GitHub | Live Demo

- Engineered a full-stack digital queue management system using React.js, Node.js, Express.js, MongoDB Atlas, and Socket.io, replacing manual queue tracking with real-time updates.
- Designed and implemented 10 RESTful API endpoints covering authentication, token generation, queue management, analytics, and queue history.
- Enforced secure separation of User and Admin workflows through server-side role validation, preventing unauthorized access to admin operations.
- Integrated Socket.io WebSockets to synchronize queue updates instantly across multiple connected clients without manual refresh.
- Deployed the application on Vercel and Render with MongoDB Atlas, configuring environment variables and production-ready backend connectivity.

SKILLS

Languages: JavaScript, Python

Frontend: React.js, HTML, CSS, Bootstrap, Axios

Backend: Node.js, Express.js, RESTful APIs

Database: MongoDB, MongoDB Atlas, Mongoose

Authentication: JWT

Real-Time: Socket.io

AI Integration: Google Gemini API Integration

Deployment: Vercel, Render

Tools: Git, GitHub, Postman, MongoDB Compass, VS Code

CERTIFICATIONS

- Full Stack Development, GRAS tech (2025)

NOTABLE ACHIEVEMENTS

- Designed and implemented 18+ RESTful API endpoints across two independently shipped, production-ready MERN applications spanning authentication, session management, and real-time updates.
- Integrated AI-powered interview evaluation and real-time WebSocket communication into production-ready MERN applications deployed on cloud platforms.
